CLAIMS

What we claim as our invention is:

1. A multi-use, convertible sling/bag type apparatus for sportsmen and others for the express purpose of providing an individual with a simple, convenient and inexpensive method of carrying a diverse assortment of cargo without the aid of further modifications to the apparatus, comprising:

a pair of 57" long, 2" wide, Nylon webbing shoulder straps, each having a fixed first end, and an adjustable second end; a pair of 20" long, 1" wide Nylon webbing straps, with fixed ends for hand-carry; a single, sling platform, approximately 24" square, made of a fabric such as Nylon Packcloth, canvas or the like; a pair of 10" long, jacket weight, separating zippers; a pair of 8" long, 2" wide lengths of Nylon strapping, which matches the other 2" wide lengths of shoulder strapping; one 12" long, 1/2" wide length of elastic strapping; two (2) 2" wide plastic Looplocks; two (2) 2" wide plastic Tri-Glides; one (1) 2" wide plastic D-Ring; one (1) 2" wide plastic Snaphook;

which when assembled and/or sewn together, as illustrated by the enclosed drawings, will provide an individual with a means of moving cargo, either with the aid of hand -carry straps or adjustable shoulder length, over and around the head, straps.

2. A sling type apparatus which incorporates two (2) inverted (pull-down), 10 inch long, jacket weight, separating zippers, which allows the apparatus to function as an enclosed-end bag when the pull-tabs of both zippers are drawn all the way down, or, as a sling when either or both of the zippers are adjusted up (pull-tabs raised) or separated, subject to the size and shape of the cargo to be carried.

3. It is also claimed that the fabrics and separating zippers used in the invention are flexible enough that the apparatus can be both free-forming to the cargo being carried and easily folded to to about double the size of a man's wallet before securing with its' own elastic strap, for easy storage or carry.
